Extract the Zip

- Extract the zip file to a location, that will allow the application to have access to it.
- There is an install folder extracted with the zip file.
- Browse to the install folder.

install

This PC > Code (\\vanusdisk) (K:) > translator > yt-asr-main > install

Search install

Windows PowerShell

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

Loading personal and system profiles took 1559ms.
(base) PS K:\translator\yt-asr-main\install>
```

Do you have miniconda installed?
If you do then the (base) will be available in a terminal window.
This is the current Python environment.
If you need miniconda, either click or scan the barcode.

https://www.anaconda.com/docs/getting-started/miniconda/install/windows-gui-install

```
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

Loading personal and system profiles took 1559ms.
(base) PS K:\translator\yt-asr-main\install> conda create -n transcription python=3.13
```

Skip this step if you have already install the yt-asr before.

This step creates a new Python environment with Python version 3.13.
This is a great feature of using miniconda.
None of your other Python environments will be affected!

```
  python             pkgs/main/win-64::python-3.13.12-h39c999c_100_cp313
  python_abi         pkgs/main/win-64::python_abi-3.13-3_cp313
  setuptools         pkgs/main/win-64::setuptools-80.10.2-py313haa95532_0
  sqlite             pkgs/main/win-64::sqlite-3.51.2-hee5a0db_0

  tzdata             pkgs/main/noarch::tzdata-2026a-he532380_0
  ucrt               pkgs/main/win-64::ucrt-10.0.22621.0-haa95532_0
  vc                 pkgs/main/win-64::vc-14.3-h2df5915_10
  vc14_runtime       pkgs/main/win-64::vc14_runtime-14.44.35208-h4927774_10
  vs2015_runtime     pkgs/main/win-64::vs2015_runtime-14.44.35208-ha6b5a95_10
  wheel              pkgs/main/win-64::wheel-0.46.3-py313haa95532_0
  xz                 pkgs/main/win-64::xz-5.8.2-h53af0af_0
  zlib               pkgs/main/win-64::zlib-1.3.1-h02ab6af_0

Proceed ([y]/n)?
```

Press [y]

Windows PowerShell

```
(base) PS K:\translator\yt-asr-main\install> conda activate transcription
(transcription) PS K:\translator\yt-asr-main\install> .\win-required.bat
=== yt-subtitle-extract: Windows prerequisites ===

[1/1] Installing ffmpeg ...
Found an existing package already installed. Trying to upgrade the installed package...
No available upgrade found.
No newer package versions are available from the configured sources.

[WARN] winget reported an error. ffmpeg may already be installed,
       or you may need to restart your terminal to pick up PATH changes.

-----------------------------------------------------
 NOTE: tkinter ships with the standard Python installer
 from python.org.  If you installed Python via the
 Microsoft Store, tkinter may be missing -- reinstall
 from https://www.python.org/downloads/windows/
-----------------------------------------------------

Prerequisites done.  You can now run:
  pip install .
  pip install ".[audio]"   (adds audio playback support)

Press any key to continue . . .
```

Next type in this!

```
(transcription) PS K:\translator\yt-asr-main\install> cd ..
(transcription) PS K:\translator\yt-asr-main> pip install .[all]
Looking in indexes: https://pypi.org/simple, https://pypi.ngc.nvidia.com
Processing .\.
  Installing build dependencies ... -
```

We now have the required packages installed.
We still need to set up the command.
Currently we are in the install directory but that is for the required packages. Instead we need to go up one folder first so type: `cd ..`
Now we can go ahead and install it by typing : `pip install .[all]`

Windows PowerShell

```
(transcription) PS K:\translator\yt-asr-main> cd ..
(transcription) PS K:\translator> yt-asr
```

1) Navigate to the folder where your data will be store.

2) Ensure that you are in the Python environment that you installed the yt-asr app in.
If you are not then type:
`conda activate <environment-name>`

3) Start the application.
If this does not work then take the steps from the beginning again.
Start with:
`conda deactivate`
